

END-USER: EXCLUSIVE PAYMENT METHODS

"A truly gratifying process for your clients"

"A real trip to the future"

HOW DO THEY WORK?

ATIONET provides the infrastructure in order to offer support for the transactions conducted through an external e-wallet.

WHAT DO WE OFFER?

• Mercado Pago

ATIONET offers the necessary infrastructure so that the fuel transactions carried out at the gas station can be paid through Mercado Pago's mobile app. You only have to scan Mercado Pago's QR code and verify the purchase in order for the transaction to be successfully carried out.

Your own e-wallet

ATIONET can be integrated with third-party e-wallets in order to authorize fuel transactions at the gas station. You only need to scan a QR code with the app of the e-wallet in question in order to effectively carry out the purchase.

ATIONET FLEETS: EXCLUSIVE PAYMENT METHODS

HOW DO THEY WORK?

ATIONET provides the infrastructure and our company's e-wallet (which runs in ATIONET Driver, our well-known mobile app). The wallet is 100% integrated with our popular fleet module.

WHAT DO WE OFFER?

Fully integrated

A sturdy method that allows the execution of preauthorizations for fleet transactions, only at gas stations that own a fuel pump controller capable of communicating with the MPPA protocol (Conexxus).

Dynamic QR

A method offered by ATIONET that allows third-party Points of Sale (POS) to generate dynamic QR codes (following an ATIONET standard) containing the transaction's data.

Disconnected

A method designed for gas stations that don't own a fuel pump controller.
